mile so you can go
the distance

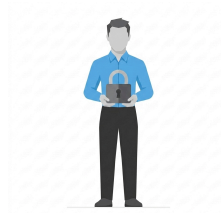

Does Your TM1 Support Model Create Bottlenecks?

Traditional TM1 support is often static, expensive, and reactive. This leads to common challenges that hinder your finance team's performance.

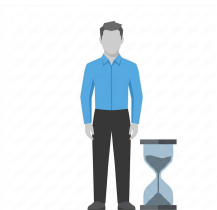

High & Unpredictable Costs

Fixed overhead for in-house staff or rigid vendor contracts.

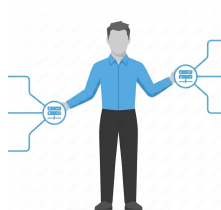

Key Person Risk

Critical knowledge is siloed with one or two individuals.

Slow Enhancements

A long backlog of change requests and bug fixes stalls progress.

Inability to Scale

You can't easily ramp up for budget season or scale down during quiet periods.

A Single Subscription for Total TM1 Operations

We replace reactive "support tickets" with proactive, outcome-focused operations. Our TM1 DevOps service is a single platform combining development, maintenance, and expert support.

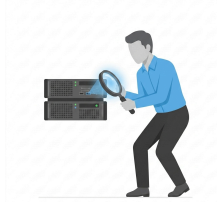

Dynamic Resourcing

Your service hours flex with your workload.

Unified Ticketing

One queue for everything—from bug fixes to new cube development.

Proactive Maintenance

We identify and solve issues before they impact your users.

You Are Always in Control

Our model is designed for maximum value and flexibility, ensuring no budget is ever wasted.

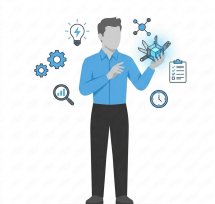

1. Choose Your Package:

Select a monthly block of hours that fits your needs.

3. Rollover Unused Hours:

Unused hours from your Blue or Black plan simply roll over to the next month.

2. Use It For Anything:

Apply your hours to support, development, training, or admin tasks.

4. Scale On-Demand:

Instantly add more hours to handle large projects or peak demand.

Everything Your TM1 Environment Needs

Your subscription gives you access to a full suite of services delivered by certified TM1 experts.

Support & Maintenance

- 24/7 SLA-based support
- Performance tuning
- Health checks
- Automated backups

Development & Enhancements

- New cube/rule builds
- Dashboard creation (PAW)
- Integration projects

Training & Enablement

- Online training portal
- User workshops
- Best-practice guidance
